

Florida's Strategic Instruction Model (SIM)

fdlrs.org/departments/sim

Under the direction of the Bureau of Exceptional Student Education and Student Services (BEES), the FDLRS Administration Project is responsible for working with Florida's SIM Professional Developers to coordinate the SIM Initiative in the Sunshine State. We are privileged to have the opportunity to work with these committed educators.

The University of Kansas Center for Research on Learning (KUCRL) developed the **Strategic Instruction Model (SIM)**. For over thirty years, they have conducted research designed to develop ways to help students meet the demands of life, not just in school but after they leave school as well. SIM is about promoting effective teaching and learning of critical content in schools.

Content Enhancement Routines

Teacher-focused interventions direct how teachers think about, adapt, and present their critical content in "learner-friendly" fashion.

Learning Strategies

Student-focused interventions designed to provide the skills and strategies students need to learn the content.

2 Components of SIM

Additional SIM resources can be accessed at the following websites:
